

IOSS GmbH – Over 25 years of experience that builds trust

IOSS GmbH, based in Radolfzell on Lake Constance, is a reliable full-service provider of code and OCR readers as well as verifiers for code quality inspection. The systems are used worldwide across various industries, including general industry, the semiconductor industry, and the medical technology sector.

IOSS code readers offer outstanding reading performance and the highest level of reliability, especially for dot-peened codes, thanks to specially developed algorithms.

For code quality inspection, IOSS GmbH offers a range of verifiers. Particularly for directly applied markings (DPM), our systems enable standard-compliant verification according to ISO/IEC 29158. They are ideally suited for spot checks in the measuring room as well as for inline use directly on the production line.

To meet regulatory requirements in the medical technology sector, IOSS GmbH has also developed standard-compliant verifiers for UDI codes.

The globally established DMR210 Verifier is used for the inspection of directly marked UDI codes.

New to the portfolio is a verifier for printed 2D codes on labels, which meets the requirements of the ISO/IEC 15415 standard. In combination with the intuitive Q-Report documentation software, quality reports can be created quickly and easily.

The newly developed Q-Scanner is also enjoying great popularity worldwide. As a compact desktop scanner, it impresses particularly in the DPM sector with its unmatched reading performance and ease of use.
